

Wavin AJ

Preferred by **one** and all

Ireland's **No.1** choice
of Access Junction.

Get the only
one you need

wavin

An Orbia business.

No.1 choice of professionals for 45 years

Independently tested and certified to EN 13598-1

10 flow profiles to match every application

Assured 'Wafix' triple seal with high angle of deflection

No.1 whichever way you look at it

As with all things of lasting quality, it's the little things that add up to make Wavin's Access Junction the **No.1 choice of Ireland's groundworkers for over 45 years.**

The fast, easy installation. A range of profiles and matching invert levels for inlets and outlets to minimise the risk of blockages and make rodding easier.

The unique Wafix seals – a triple layer captive seal so that you know when a pipe is in, it's in. No bother, no doubts, no leaks, no future problems. It's made to work and made to last.

There's the socket profile that allows a high angle of deflection, so you have more connection flexibility. Plus the adjustable frame and cover, which tilts and rotates to suit site conditions.

Even little extras like directional flow arrows, to reduce the risk of installation errors, and third-party certification mark out the WAJ as superior.

Kitemarked, compliant with EN 13598-1 and Building Regulations – Part H – to a maximum depth of 0.6m, Wavin's Access Junction is tested, trusted, proven and better at every turn. Fit the best – forget the rest.

Level invert inlets for maximum flow and less risk of blockages

Push-fit sealed riser with choice of covers

Fast and easy to install with adjustable frame and cover

Durable thick-walled PVC system for ultimate performance

Part of complete Wavin Sewer system

Available nationwide

“ The reason we use Wavin is the system comes as a whole, and we have peace of mind that once the system goes in the ground it's going to work. Here at Magna Construction we do it once, we do it right. ”
