## Where it should be used

B125 covers offer a maximum weight loading of 12.5 tonnes. For use in both private residential and public pedestrian areas, specifically:

### Single domestic driveways

Modern cars are getting bigger and heavier with 2 tonnes the new normal. A15 rated covers, even those rated to 3.5 or 5 tonnes are no longer sufficient. B125 rated cover gives added peace of mind for both the homeowner and the contractor.

### Public footpaths

B125 rated covers are recommended as the minimum requirement for non-trafficked public spaces.
